Step 4I: Measure from under the bottom of the front deck joist to the ground or to support blocks if any are being used. **Step 4J**: Transfer that measurement to the shorter side of the support legs. **Step 4K**: Cut the legs to the correct length with a saw. **Step 4L**: Position the legs under the third deck board from each end and secure to the front joist using two deck screws.

Step 4M: The deck assembly is now complete and can be walked on. If you are concerned about the finished appearance, cover it with a small tarp to keep it clean while people access the Hut for interior work.

NOTE: If Hut is being placed on soft ground, it is better to cut the legs about 1/8" longer to account for settling, which will occur from stepping up and down on the front deck.
