

Figure 4. 2X4 wall block spacing tool. This simple-to-make tool accurately spaces the wall blocks.

Figure 5. Spacing tool is used to mark the positions of the 2X4 wall blocks.

- (8) Find the center of the wall at top by measuring the center of the vent hole and using a speed square to transfer that point to the top edge.

- (9) Mark the position of the wall blocks on the edge of your wall. Start at the top and work your way down to the last block using the homemade spacing tool (**figs. 4 and 5**). The measurements in **Figure 6** give the center position of each block. To install the blocks, line up the center of the block roughly with the mark.
